CHAPTER 1: OVERVIEW

1.1 EXECUTIVE SUMMARY

In the context of the robust development of the digital economy along with the growing popularity of the freelance trend, many students currently possess skills such as design, translation, slide creation, video editing, content writing, or web programming. However, the majority of students still face difficulties in finding clients and opportunities to earn extra income from their own skills. Meanwhile, many individuals, small shop owners, student clubs, and startups have a demand for hiring people to perform short-term tasks at reasonable costs but encounter obstacles in finding suitable, reliable, and highly responsive candidates.

Currently, international freelance platforms like Fiverr or Upwork operate on a large scale with high levels of competition, and their payment processes remain relatively complex for Vietnamese students. In addition, there are popular job-seeking platforms in Vietnam, such as YBOX. However, these platforms primarily focus on recruitment, internships, or long-term employment, whereas the demand for short-term, small-scale, and quick-turnaround tasks between students and individuals or small businesses has not been effectively exploited. Furthermore, finding freelancers through social media groups still poses numerous risks, such as scams, lack of information transparency, and the absence of a payment protection mechanism between the two parties.

Originating from this reality, the team proposes the development of the "J4S – Job For Student" platform, a website that connects skilled students with individuals or organizations in need of hiring for short-term tasks at reasonable costs. The platform operates under a micro-freelance marketplace model, where hirers post jobs, student freelancers submit proposals, and the system supports appropriate matching based on skills, credibility ratings, and job relevance.

In addition to the core connecting function, the project integrates various mechanisms to enhance safety and transparency for users, including identity verification, intermediary payments, a two-way rating system, and deadline management. Furthermore, AI is utilized to support job analysis, suggest suitable freelancers, standardize job posting information, and improve connection efficiency between both sides.

Through this project, the team desires to create a safe, transparent, and accessible freelance environment for Vietnamese students. Simultaneously, the platform aims to help students gain more opportunities to develop their skills, accumulate practical experience, and generate income from their own capabilities, while supporting individuals and small businesses in accessing a flexible workforce at reasonable costs.

1.2 GENERAL INFORMATION

1.2.1 Company Information

- Company's name/ Group's name: J4S - Job For Student
- Address: 600 Nguyen Van Cu Street, Ninh Kieu Ward, Can Tho City.
- Logo:

The J4S logo represents connection, opportunity, and career development orientation for students. The name “J4S” stands for “Job For Student,” reflecting the mission to support students in finding suitable jobs and accessing career opportunities.

The handshake symbol at the center of the logo symbolizes collaboration, trust, and the connection between students and businesses. This imagery demonstrates the role of J4S as a bridge that helps both parties generate mutual value and benefits.

The curved lines surrounding the handshake symbol represent continuous linkage, network expansion, and the connection of limitless opportunities. Concurrently, it signifies long-term development in the career journey of students.

The modern metallic design combined with the dark blue background creates a sense of professionalism, prestige, and reliability. The silver color symbolizes sustainability and professionalism, while the rose gold shade on the number “4” expresses the creativity, enthusiasm, and aspirations of youth.

In addition, the network symbol above the logo represents technology and digital connectivity, emphasizing that J4S is a modern platform utilizing technology to support students in searching for jobs more effectively.

The slogan “Connecting platform - Job searching” further affirms the goal of J4S to become a reliable bridge between students and suitable employment opportunities.

- Established date: 11/5/2026

1.2.2 Company's Department

To ensure the project operates effectively, the organizational structure is divided into different departments with specific responsibilities that match each member's abilities. This organizational model helps the development process of the website platform connecting students with businesses become more synchronized, organized, and easier to manage.

CEO: Lam Ngoc Phuong

The CEO is responsible for managing and operating all project activities to ensure the website platform operates stably and follows the planned development direction. This position is responsible for monitoring the working progress of each department, assigning suitable tasks, and supporting the resolution of issues arising during the development and operation of the system. In addition, the CEO makes decisions related to product development strategies, market expansion orientation, and ensures effective coordination among team members so that the project operates synchronously and efficiently.

COO: Ho Nhu Thanh Ngoc

The COO is responsible for planning the implementation of the website from the idea development stage to completion and actual operation. The work includes monitoring the system development progress, managing the project timeline, assigning tasks to each department, and ensuring that all features are completed on schedule. In addition,

this position directly manages the project fanpage, monitors posted content, updates outstanding recruitment information, and responds to user messages to maintain interaction with students and businesses. The COO is also responsible for connecting departments to ensure all activities are implemented synchronously, supporting the resolution of operational issues, and proposing solutions to improve the effectiveness of project activities.

CBDO: Le Hoang Phuong Thao

The CBDO is responsible for searching for and developing a network of businesses that need to recruit online part-time employees. Specific tasks include contacting businesses, introducing the platform, consulting suitable recruitment packages, and building long-term cooperative relationships. At the same time, this position also researches labor market demands, updates trends in part-time jobs for students, and proposes strategies to develop potential customers. In addition, the CBDO supports checking the quality of recruitment posts to ensure transparency and limit fraudulent or unsuitable recruitment information on the platform. Besides that, the CBDO also supports answering customer inquiries, handling complaints, and coordinating with the technology department to improve service quality and increase user satisfaction.

CMO: Lam Thanh Phat

The CMO is responsible for building promotional strategies and attracting users to the website platform. The work includes implementing marketing campaigns on Facebook, TikTok, and other online platforms to increase website traffic and reach students who are looking for part-time jobs. In addition, this position also carries out brand promotion activities, creates content introducing the platform's features, and supports revenue development by consulting businesses on recruitment services.

Besides marketing activities, this position also supports customer service by monitoring user feedback on social media platforms, answering basic questions, and receiving suggestions from students and businesses to transfer to relevant departments for processing.

CTO: Le Anh Tuan

The CTO is responsible for developing and managing the entire technical system of the website. The work includes designing the user interface, building account registration features, and developing the web platform. In addition, this position also manages the database, checks system security, fixes website errors, and optimizes operating speed to ensure a stable user experience. The CTO directly manages the website, updates new features, monitors system performance, and handles technical problems arising during operation to ensure the platform runs continuously and effectively.

CCO: Tieu Gia Huy

The CCO is responsible for building the brand image and developing communication content for the project. The work includes designing posters, banners, promotional videos, and communication materials to increase the professionalism and brand awareness of the platform. In addition, this position also creates communication content suitable for students and businesses and supports building a consistent brand image across online platforms.

Besides that, the CCO also coordinates with the CMO to implement promotional campaigns, support communication ideas, and monitor the effectiveness of brand recognition for the project. Maintaining a professional image and creating a positive impression on users are important responsibilities that support the long-term development of the platform.

The organizational structure is developed based on a clear division of responsibilities among departments to ensure the website platform operates effectively and stably. Each position plays an important role in supporting the development, management, communication, marketing, and operation of the project. The coordination between departments helps improve work efficiency, enhance user experience, and support the long-term development of the platform in the future.

1.3 PRODUCTS/ SERVICES DESCRIPTION

1.3.1 Product Overview

J4S (Job For Students) is an online freelance platform that connects students with individuals, student clubs, startups, and small businesses that require short-term services with reasonable costs. The platform provides a secure and convenient environment where students can find freelance opportunities that match their skills while customers can access a flexible workforce.

Unlike traditional recruitment platforms, J4S focuses on micro-freelance and short-term projects suitable for students, including graphic design, translation, content writing, presentation design, video editing, and basic programming.

In addition, J4S is designed to integrate artificial intelligence (AI) technology to analyze job requirements, recommend suitable freelancers, and improve the matching process between customers and students. The platform is also designed to support identity verification and rating systems features to improve platform reliability and transaction safety.

1.3.2 Website and Platform Introduction

J4S is developed as a modern web-based freelance platform with a simple, intuitive, and student-friendly interface. The platform is designed to help students and customers conveniently connect, search for freelance opportunities, manage projects, and communicate within a single system.

The homepage interface includes a search bar, service categories, recommended freelancers, project management sections, and recently posted jobs. Users can quickly search for suitable freelance services such as graphic design, translation, presentation design, content writing, video editing, and basic programming.

In addition, the platform provides several main sections, including the freelancer profile page, job posting page, job application page, messaging page, project management page, and rating management page. These sections help users manage freelance activities more efficiently while improving communication and transparency between freelancers and customers.

The platform interface is designed to be accessible on desktops, tablets, and smartphones, allowing users to conveniently access the system anytime and anywhere. The interface layout is organized clearly with easy navigation to improve accessibility and user experience, especially for students and small businesses.

1.3.3 Service Categories

J4S offers a range of freelance service categories that cater to the skills of students and meet the needs of small enterprises, startups, student clubs, and individuals. The portal primarily focuses on short-term, student-friendly microfreelance jobs.

Design Services include poster design, banner design, social media post design, logo design, and other basic graphic design tasks for communication and promotional purposes.

Translation services support translation between Vietnamese and foreign languages such as English, Chinese, Japanese, and Korean depending on students' expertise. The platform supports translation of academic documents, articles, CVs, cover letters, subtitles, and general content. In addition, proofreading and grammar-checking services are also available.

Presentation services include PowerPoint slide design, academic presentation design, report presentation design, and visual content arrangement for seminars, classes, and projects.

Content writing services support blog writing, social media content writing, product description writing, and basic marketing content creation for individuals and small businesses.

Multimedia services include short video editing, TikTok or social media video editing, subtitle insertion, and basic promotional video editing.

Programming services support simple website development, landing page design, portfolio website creation, and basic website maintenance suitable for startups and small businesses.

These service categories help students monetize their skills while allowing customers to access flexible freelance services with reasonable costs.

1.3.4 The Main Features of the Platform

The platform provides a registration and login system that allows users to create accounts and access the platform as customers or student freelancers. Users can create freelancer profiles that include personal information, skills, portfolios, completed projects, and customer reviews. To improve platform reliability and reduce fraudulent activities, both freelancers and customers are required to verify their email addresses and phone numbers through OTP authentication during the registration process. In future development phases, freelancers may also be required to link their bank accounts for additional identity verification. For employers, the platform requires verified contact information, and business users are encouraged to provide their business names to improve transparency and credibility.

In addition, customers can post freelance jobs by providing detailed information such as job descriptions, budgets, deadlines, and required skills. Student freelancers can search for suitable projects and submit proposals with their portfolios, expected prices, and estimated completion time.

J4S also includes an integrated messaging system that allows both parties to communicate directly during the cooperation process. Furthermore, the platform supports a rating and review system that allows customers and freelancers to evaluate each other after project completion in order to improve transparency and credibility.

For future development phases, J4S plans to integrate advanced recommendation systems, job analysis support, and smart matching functions to improve connection efficiency between users.

1.3.5 Technical specifications and platform interface

J4S is a flexible web-based platform that links students with small businesses, startups, student organizations, and individuals in need of temporary freelance services. The platform's design aims to give consumers accessibility, stability, and convenience of use.

The system supports account registration, login, freelancer profile management, job posting, proposal submission, messaging, and rating functions. In addition, the platform stores and manages user information, project details, and transaction history through a centralized database system.

J4S is designed to be accessible on desktops, tablets, and smartphones through popular web browsers such as Google Chrome and Microsoft Edge. The responsive interface design helps users conveniently access the platform anytime and anywhere.

In the initial system development phase, the platform mainly focuses on implementing core system functions, including user management, job posting, proposal submission, messaging, and rating systems.

The platform architecture is designed to support scalability, accessibility, and future feature expansion. The system uses a centralized database structure to manage user accounts, freelancer profiles, project information, proposals, ratings, and transaction history.

In addition, the web structure helps optimize accessibility across different devices and browsers while improving overall system performance and user experience.

1.3.6 Workflow

The workflow of J4S begins when customers create accounts and post freelance jobs with detailed information such as job descriptions, budgets, deadlines, and required skills. After that, student freelancers can search for suitable jobs and submit proposals together with their profiles, portfolios, expected prices, and estimated completion time.

Customers then review applications and select suitable freelancers for cooperation. Both parties can discuss project details and requirements through the integrated messaging system before starting the project.

During the project process, freelancers complete assigned tasks and submit their work to customers for review and feedback. Based on customer feedback, freelancers can revise the product within the agreed scope of work before submitting the final version. Customers are allowed up to three revision requests depending on the agreement between both parties.

After the project is completed and approved, both customers and freelancers can provide mutual reviews and ratings based on work quality, communication, professionalism, and completion time. This system helps improve transparency and credibility on the platform.

1.3.7 Benefits of J4S

J4S provides various benefits for both student freelancers and customers by creating a flexible, accessible, and student-oriented freelance environment.

For students, the platform creates opportunities to earn additional income through short-term freelance projects that match their skills and schedules. Students can gain practical working experience, improve communication and project management skills, build professional portfolios, and develop credibility through ratings and completed projects. In addition, J4S allows students to access freelance opportunities more easily without competing directly in large international freelance marketplaces.

For customers, J4S provides access to a flexible workforce with reasonable costs and faster hiring processes. Individuals, student clubs, startups, and small businesses can quickly find suitable freelancers for short-term tasks such as graphic design, translation, content writing, presentation design, video editing, and basic programming. The platform also helps reduce recruitment time and operational costs compared to traditional hiring methods.

Furthermore, J4S aims to improve transparency and trust in freelance cooperation through profile systems, review systems, and future identity verification. These functions help create a safer and more reliable working environment for both freelancers and customers.

1.3.8 Revenue Model

J4S generates revenue through a combination of membership subscriptions and recruitment promotion services. The primary source of revenue comes from the membership package designed for employers. For individuals, startups, student clubs, and businesses with frequent recruitment needs, J4S offers a Membership package priced at VND 99,000 per month. This package allows employers to post up to ten jobs per month, view complete freelancer profiles, access advanced search filters, and receive AI-supported freelancer recommendations. This model aims to create a stable and sustainable source of revenue while providing additional value to employers.

In addition to membership subscriptions, J4S also generates supplementary revenue through Featured Job postings. Employers can pay an additional fee of VND 30,000 per job to have their recruitment posts displayed in prominent positions on the homepage or at the top of search results for seven days. Unlike regular job posts, which are displayed according to posting time, featured job posts receive greater visibility and can reach more potential freelancers. This service helps employers attract

suitable candidates more quickly and reduce recruitment time while creating an additional revenue stream for the platform.

1.3.9 MVP Development Roadmap

Phase 1 – Minimum Viable Product (MVP) After EXE101

After completing EXE101, J4S aims to develop a Minimum Viable Product (MVP) that focuses on the platform's core functions. The MVP will include user registration and login, freelancer profile creation, job posting, proposal submission, and an integrated messaging system that allows communication between customers and freelancers. In addition, the platform will support QR-based payment transactions between customers and freelancers through third-party payment services. The primary objective of this phase is to validate market demand, evaluate user interest, and collect feedback on the platform's usability before investing in more advanced features and large-scale development.

Phase 2 – Expansion and Enhancement (E2)

After the MVP has been tested and validated, J4S plans to expand the platform by introducing additional features that improve trust, security, and long-term sustainability. These developments include user verification through email and phone number authentication using OTP, a reporting and reputation management system that allows the platform to review violations and remove accounts involved in serious misconduct, premium recruitment packages for employers, and a mandatory two-way rating and review system after project completion. The main objective of this phase is to strengthen user trust, improve platform transparency, enhance the overall user experience, and establish a sustainable revenue model for future growth.

1.3.10 Product Illustration

1.4 POINT OF DIFFERENTIATION, COMPETITIVE ADVANTAGE, CHALLENGES AND DIFFICULTIES:

Product Differentiation	Team's competitive advantages	Challenges and Difficulties
The platform specifically focuses on students and short-term jobs (micro-freelance opportunities) instead of long-term recruitment like many current job websites.	The group focuses on a niche market that has not been strongly exploited in Vietnam, making it easier to create a unique market positioning.	The platform faces challenges in building trust with new users due to its lack of reputation while also having to compete directly with well-established competitors such as Fiverr, Upwork, and YBOX.
The platform supports small and quick tasks such as poster design, slide creation, CV editing, video editing, and translation, which are well suited to the common skill sets of students.	It is suitable for the practical needs of students as well as individuals and small businesses with limited budgets.	The platform requires investment in marketing and community building during the early stages in order to create a network effect.
The platform has an identity verification system using student emails, phone numbers, or bank accounts to minimize fake accounts.	The platform is easy for young users to access and does not require advanced technological skills to use.	Some users may be reluctant to provide personal information when registering for an account.
The platform integrates AI to suggest suitable freelancers, analyze job information, and detect incomplete job descriptions with missing data.	This increases the speed of connection between clients and freelancers while also helping reduce disputes caused by unclear information.	Integrating AI requires additional technical costs and time to optimize the system for effective performance.

The platform includes a two-way rating system and deadline management mechanism to enhance professionalism in the working process.	This helps create a transparent freelance environment and encourages users to maintain their credibility on the platform.	It is difficult to completely resolve disputes related to product quality or customers' personal dissatisfaction.
The interface and processes are designed to be simple and user-friendly for Vietnamese students.	This creates an advantage in response speed and aligns with the current trend of fast hiring.	The platform needs to maintain a sufficient number of active freelancers to handle urgent tasks effectively.

CHAPTER 2: MARKET

2.1 MARKET SURVEY

2.1.1 Content survey

Survey Content: The survey was designed to collect information from potential customers regarding their awareness, needs, usage behavior, expectations, and acceptance of the J4S platform. The questionnaire consisted of 12 questions and was divided into the following main categories:

Screening Questions: To determine whether respondents have previously known about or used job-search websites and freelance platforms. This section helps evaluate customers' awareness of the online employment market and existing freelance platforms.

Customer Needs Assessment: To identify users' purposes for seeking jobs or freelance opportunities, such as increasing personal income, gaining practical experience, building a personal portfolio, or developing professional skills.

Job-Seeking Behavior Assessment: To explore the channels customers commonly use to search for employment opportunities or freelance projects, including Facebook, LinkedIn, YBOX, TopCV, referrals from friends, and other platforms.

Service Demand Assessment: To identify the types of services customers are interested in on the J4S platform, including graphic design, translation, presentation slide design, content writing, video editing, programming or website design, and other services.

Product Value Evaluation: To investigate the reasons why customers would like to use the J4S platform, including:

- A platform dedicated specifically to students.
- Easy access to short-term jobs that match users' skills.

- Reasonable freelancer hiring costs.
- Verification mechanisms that increase trustworthiness.
- A two-way rating system between clients and freelancers.
- AI-powered job or candidate recommendation features.

Identifying Dissatisfaction with Existing Platforms: To examine the difficulties customers currently face when using job-search or freelance platforms, including:

- Difficulty finding suitable jobs.
- Excessive competition.
- Fake accounts or lack of transparency.
- Incomplete job information.
- Difficulty evaluating partner credibility.
- Time-consuming communication and collaboration processes.

Feature Demand Assessment: To identify the features customers would like J4S to prioritize, including:

- User identity verification.
- Transparent rating and feedback systems.
- AI-powered job or freelancer recommendations.
- Direct messaging systems.
- Job progress and deadline management.
- Secure escrow payment systems.
- Student-focused portfolio profiles.

Platform Preference Assessment: To determine which channel customers would prefer to use for J4S, including a website, mobile application, or both.

Willingness-to-Pay Assessment: To evaluate customers' willingness to pay for premium platform features and determine appropriate pricing for future service packages.

Collecting User Suggestions: To gather users' opinions and recommendations for improving the product, features, and overall user experience of the J4S platform.

Demographic Information: To collect basic information regarding respondents' age and gender for customer segmentation and market analysis purposes.

Google Form Survey Link:

https://docs.google.com/forms/d/e/1FAIpQLSeSaG1nO0lIiNkDYbfIBPELi4JkIOyhltFPw0VvWXvG6-bngw/viewform?usp=send_form

Survey Methodology: The team employed a quantitative research method using an online questionnaire designed through Google Forms. The survey was distributed through student groups, learning communities, student clubs, and the personal networks of team members. The collected data were compiled, cleaned, and analyzed using descriptive statistical methods to evaluate market demand, customer behavior, and the suitability of the J4S project.

Survey Period: From June 9, 2026, to June 13, 2026.

Survey Location: Online survey conducted nationwide, primarily targeting students at Vietnamese universities.

Survey Participants: University students, recent graduates, freelancers, and individuals seeking short-term employment opportunities or freelance services.

Number of Respondents: 110 participants.

Number of Survey Samples Included in the Analysis: 103 valid responses after data screening and cleaning.

2.1.2 Result evaluation

2.1.2.1 Awareness of Job Search and Freelance Platforms

Câu 1. Anh/chị đã từng biết hoặc sử dụng các website tìm việc làm hoặc nền tảng freelance chưa?
110 câu trả lời

With 93.7% of respondents having either used or been aware of freelance platforms, it can be concluded that J4S's target market already possesses a relatively high level of awareness regarding online job-matching platforms.

From a student perspective, this indicates that searching for employment opportunities through digital channels has become a common habit. Students no longer rely solely on traditional channels such as employment centers or personal connections but actively seek career opportunities through online platforms. This demonstrates a high

level of technological readiness among the target audience and their ability to adopt digital products such as J4S.

From a market perspective, this result indicates that the freelancer-client marketplace model has already been accepted by the market. As a result, market demand risk is significantly reduced because users already understand how such platforms operate.

For J4S, the survey provides strong evidence that the project does not need to convince customers to adopt an entirely new business model. Instead, J4S only needs to address the shortcomings users currently experience on existing platforms. This significantly reduces marketing costs during the early stages and shortens market entry time.

Level of support for the J4S idea: Very High.

2.1.2.2 Purpose of Seeking Jobs or Freelance Opportunities

Câu 2. Anh/chị hiện đang tìm kiếm cơ hội việc làm hoặc freelance với mục đích gì?

103 câu trả lời

The survey results indicate that 48.5% of respondents seek jobs to increase their income, while 32% seek practical work experience.

These findings suggest that students pursue employment opportunities for both financial and career-development reasons. Students not only need income but also require experience, skills, and practical achievements to prepare for the labor market after graduation.

This indicates that J4S's target market is not composed of short-term users only but has the potential to become a long-term user base. A student may begin with simple projects to earn additional income and later continue using the platform to build a portfolio, improve skills, and pursue higher-value projects.

From a business perspective, this creates greater opportunities for user retention. Users are motivated to return to the platform repeatedly throughout their academic journey rather than using it only once.

For J4S, these findings validate the decision to develop portfolio systems, competency evaluations, and work-history tracking features.

Level of support for the J4S idea: Very High.

2.1.2.3 Current Job Search Channels

Most Used Job Search Channels

- Facebook: 60%
- TopCV
- YBOX

Most Demanded Services

Câu 3. Anh/chị thường tìm kiếm việc làm hoặc dự án freelance thông qua đâu?

105 câu trả lời

Facebook accounted for the highest percentage at 60%, followed by TopCV and YBOX.

This indicates that users still rely heavily on general-purpose platforms rather than a specialized platform designed specifically for student freelancers.

Facebook offers a large user base but suffers from significant limitations, including fragmented information, difficulty verifying credibility, high scam risks, and a lack of transaction management mechanisms.

The fact that Facebook is the most popular channel does not necessarily mean users are satisfied with it. Instead, it suggests that the market is currently relying on an alternative solution because no better option is available.

This is a critical indicator of an existing market gap that J4S can exploit.

Furthermore, these findings help J4S determine its customer acquisition strategy. Since most target users are active on Facebook, it should become the primary communication and marketing channel during the project's launch phase.

Level of support for the J4S idea: High.

2.1.2.4 Services of Interest on the J4S Platform

Câu 4. Những dịch vụ nào anh/chị quan tâm trên một nền tảng như J4S? Có thể chọn nhiều đáp án
103 câu trả lời

The most popular services were Translation (45.6%), Content Writing (44.7%), Presentation Slide Design (40.8%), and Graphic Design (36.9%).

These results accurately reflect the current skill structure of university students. These services have relatively low entry barriers, are easy to learn, easy to practice, and are suitable for students with limited work experience.

From a platform operation perspective, this is a positive signal because J4S can quickly build a freelancer supply base without investing heavily in attracting high-level professionals.

From a customer perspective, these services are also among the most common needs of small businesses, startups, online stores, and student organizations. This increases the likelihood of successful transactions and improves marketplace liquidity.

The survey provides evidence that J4S's current MVP focuses on the service categories with the highest market demand.

Level of support for the J4S idea: High.

2.1.2.5 Reasons Customers Want to Use J4S

Câu 5. Lý do Anh/Chị muốn sử dụng nền tảng J4S? Có thể chọn nhiều đáp án

103 câu trả lời

63.1% selected the ability to find jobs that match their skills, surpassing technology-related factors such as AI.

This is a highly important finding. It demonstrates that users are less concerned about how advanced a platform's technology is and more concerned about whether the platform can solve their problems efficiently.

This proves that J4S's core value lies not in AI itself but in accurately matching employer requirements with student capabilities.

In addition, 45.6% of respondents valued the fact that J4S is specifically designed for students. This suggests that students have unique needs that are not fully addressed by current freelance platforms.

This finding serves as strong evidence validating J4S's Unique Value Proposition (UVP).

Level of support for the J4S idea: Very High.

2.1.2.6 Dissatisfaction with Existing Platforms

Câu 6. Điều gì khiến anh/chị chưa hài lòng ở các nền tảng tìm việc/freelance hiện nay? Có thể chọn nhiều đáp án

105 câu trả lời

The three largest issues identified were excessive competition (52.4%), fake accounts (51.4%), and difficulty finding suitable jobs (48.6%).

These findings indicate that users are not fully satisfied with the platforms they currently use. In other words, although many competitors exist in the market, important problems remain unresolved.

This is a significant indication that the market is not saturated in terms of value creation. Users remain willing to switch to a new platform if it provides better solutions to their current challenges.

From a startup perspective, this is one of the most valuable findings because it confirms the existence of real customer pain points—the fundamental factor determining whether a project is truly needed.

If J4S successfully implements identity verification, transparent rating systems, and AI Matching, the project could establish a strong competitive advantage.

Level of support for the J4S idea: Very High.

2.1.2.7 Features Desired by Users

Câu 7. Nếu sử dụng J4S, anh/chị mong muốn nền tảng ưu tiên phát triển tính năng nào? Có thể chọn nhiều đáp án

103 câu trả lời

Users prioritized AI-powered job or freelancer recommendations (50.5%), transparent rating systems (49.5%), and identity verification (39.8%).

These results indicate that market needs are fully aligned with the core features that J4S plans to develop.

This provides evidence that the team is not building the product based on assumptions but rather addressing needs that have been directly validated by customers.

From a product development perspective, the survey helps reduce the risk of investing in unnecessary features while allowing the team to prioritize resources toward the highest-value functionalities.

Level of support for the J4S idea: Very High.

2.1.2.8 Preferred Platform Channel

Câu 8. Nếu J4S được triển khai, anh/chị sẽ ưu tiên sử dụng nền tảng này trên kênh nào?

103 câu trả lời

50.5% of users preferred a website, while 42.7% wanted both a website and a mobile application.

These results indicate that developing a website first is fully aligned with target customer behavior.

For an early-stage startup, focusing on website development instead of simultaneously building both a website and mobile application significantly reduces development costs, operational expenses, and implementation time.

The survey findings directly support the team's MVP decision.

Level of support for the J4S idea: High.

2.1.2.9 Willingness to Pay

Câu 9. Anh/chị sẵn sàng chi bao nhiêu tiền mỗi tháng để sử dụng các tính năng nâng cao trên nền tảng?

103 câu trả lời

57.3% of users are willing to pay between VND 50,000 and VND 100,000 per month.

This is one of the most important findings regarding the project's financial feasibility.

Many startups fail not because they lack users, but because users are unwilling to pay.

In J4S's case, the survey indicates that most customers accept a pricing level similar to the proposed Membership Package of VND 99,000 per month.

This confirms that the proposed revenue model is not merely an assumption but is supported by actual customer demand.

Level of support for the J4S idea: Very High.

2.1.2.10 Demographic Characteristics

Câu 11. Độ tuổi của anh/chị:

103 câu trả lời

88.4% of respondents were between 18 and 23 years old.

This is precisely the target customer segment that J4S intends to serve from the beginning.

Therefore, the survey sample is highly representative and accurately reflects the needs of the primary customer segment. This increases the reliability of the market research and strengthens the business decisions based on the survey findings.

Level of support for the J4S idea: High.

2.1.2.11 Overall Evaluation of Survey Results

The survey results provide clear evidence of a genuine demand for a student-focused platform connecting short-term jobs and freelance opportunities in Vietnam. Most respondents are already familiar with online job-search and freelance platforms, indicating that the target market is prepared to adopt digital employment solutions. This significantly reduces the time and cost required for market education during the early stages of the project.

The findings also show that students engage in freelance work not only to earn additional income but also to gain practical experience, develop professional skills, and build personal portfolios. This confirms that J4S's target users have both short-term and long-term motivations to use the platform, creating favorable conditions for user acquisition and retention.

In addition, the survey highlights several weaknesses of existing platforms, including excessive competition, fake accounts, difficulty finding suitable jobs, and a lack of transparency during the matching process. These findings confirm the existence of real market problems that J4S seeks to address. At the same time, the most desired features—AI-powered job recommendations, transparent rating systems, and identity verification—align closely with J4S's product development direction.

The survey also indicates that the service categories prioritized in the J4S MVP, such as content writing, translation, presentation slide design, and graphic design, are among the services most desired by users. This demonstrates that the team's product development strategy aligns with actual market demand. Furthermore, users' willingness to pay is consistent with the proposed Membership Package, thereby supporting the financial feasibility of the business model.

Finally, the demographic structure of the survey sample closely matches the project's target audience, with most respondents being between 18 and 23 years old. This increases the reliability of the research findings and ensures that the conclusions accurately reflect the needs of the target market.

Overall, the survey results demonstrate that J4S has strong potential to satisfy a genuine market need. The research not only confirms the existence of demand for a student-focused freelance platform but also validates that J4S's core values, key features, and business model align with customer expectations. Therefore, the project has a solid practical foundation for continued development and implementation in the next stage.

2.2 MARKET ANALYSIS OVERVIEW

2.2.1 Market size

Can Tho is the economic, educational, and service center of the Mekong Delta region. According to statistics from educational institutions in the area, Can Tho currently has approximately 75,000–80,000 students studying at universities and colleges. This represents a young labor force with strong technological adaptability and a wide range of skills suitable for the digital labor market, including graphic design, content writing, translation, video editing, and basic programming.

In addition, according to local statistics, Can Tho currently has more than 12,000 active businesses, the majority of which are small and medium-sized enterprises (SMEs). There are also thousands of household businesses, online stores, and startups operating in the city. These are potential customers who frequently need to hire short-term personnel for tasks such as design, marketing, social media management, translation, and digital content creation.

For the J4S project, the primary supplier group consists of students who possess relevant skills and wish to participate in short-term freelance jobs to earn additional income, gain practical experience, and build their professional portfolios. This is a potential labor supply source that is continuously replenished each year by universities and colleges in the city.

On the customer side, the target market includes startups, small and medium-sized enterprises (SMEs), household businesses, online stores, student clubs, and individuals who need to hire personnel for short-term tasks such as poster design, fanpage management, content writing, translation, presentation slide design, or video editing. These customers often have limited budgets and do not require full-time employees.

Currently, students in Can Tho mainly search for jobs through Facebook groups, personal networks, employment service centers, or online recruitment platforms such as TopCV, VietnamWorks, and YBOX. However, most of these channels focus on part-time jobs, internships, or long-term employment rather than short-term freelance opportunities specifically designed for students. This indicates that there is still a market gap for a specialized platform like J4S.

2.2.2 Market trend

In recent years, the freelance working trend and the gig economy have been growing rapidly in Vietnam in general and in Can Tho in particular. Many students are no longer only seeking traditional part-time jobs but are also utilizing their professional skills to participate in short-term projects in order to earn additional income, gain practical experience, and enhance their professional capabilities.

At the same time, small businesses, startups, and household enterprises are increasingly prioritizing freelancers over full-time employees to optimize costs and improve operational flexibility. Tasks such as graphic design, content writing, social media management, video editing, and marketing support are often outsourced on a project-by-project basis.

The digital transformation trend is also taking place strongly across the Mekong Delta region. Many businesses and organizations have adopted online platforms in their operations, leading to a growing demand for workers with digital skills. In addition, the widespread adoption of online collaboration tools and electronic payment systems has made cooperation between freelancers and clients more convenient.

Furthermore, the development of artificial intelligence (AI) is creating significant changes in recruitment and job-matching activities. Digital platforms can apply AI to analyze job requirements, evaluate candidate profiles, and recommend suitable matches, thereby improving recruitment efficiency and enhancing user experience.

These trends indicate that the market is becoming increasingly favorable for the development of short-term job-matching platforms for students such as J4S. At the same time, today's students are becoming more proactive in building their professional portfolios and gaining practical experience at an early stage, which further increases the demand for freelance and short-term project opportunities.

2.2.3 Market potential

The short-term job-matching market for students in Can Tho is considered to have significant growth potential because there is still a gap between the student labor supply and the short-term hiring demand of businesses. Currently, most students still rely on social media or personal networks to find job opportunities, while businesses face difficulties in finding suitable personnel for short-term projects.

J4S has the potential to address both of these needs simultaneously by building a specialized platform that connects students with individuals, organizations, and businesses seeking freelance services. By focusing on the student segment, J4S can differentiate itself from existing recruitment and freelance platforms in the market.

In addition, the platform has the potential to develop further features such as identity verification, a reputation rating system, a mobile application, and AI-powered smart matching technology. These factors will contribute to improving user experience, enhancing competitiveness, and building sustainable long-term advantages.

Beyond its development potential in Can Tho, J4S also has opportunities to expand into neighboring provinces in the Mekong Delta region, including An Giang, Dong Thap, Vinh Long and Ca Mau. Expanding its operational coverage will help increase the number of users, broaden the customer network, and create opportunities for future revenue growth.

Overall, with a large student population, increasing outsourcing demand, and a substantial market gap that still exists, Can Tho is considered a suitable location for J4S to implement and develop its student-focused short-term job-matching platform.

2.3 SWOT ANALYSIS

INTERNAL	FAVORABLE FACTORS	UNFAVORABLE FACTORS
	S – Strengths	W – Weaknesses
	- Focus on the student niche market with a micro-freelance model aligned with the gig economy trend: J4S focuses on short-term, flexible, and online jobs, meeting students' needs to earn additional income and gain practical experience in the digital economy era.	- Lack of strong brand awareness: J4S is a new platform, so users do not yet fully trust it or know about it widely.
	- Development team that understands student needs: The founding and operating team mainly consists of students, enabling them to understand the behaviors, needs, and difficulties that students encounter when searching for freelance jobs.	- Limited financial resources: Developing the website, AI, system security, and marketing requires significant costs while the startup is still small.

	- Integration of AI to support intelligent matching: AI helps analyze jobs, recommend suitable freelancers, and suggest deadlines and budgets, helping both parties save time.	- Lack of practical operational experience: The team mainly consists of students, so its experience in handling large-scale operations remains limited.
	- Two-way review system: Freelancers and customers can review each other, helping increase professionalism and transparency.	- Marketing and community-building activities are still limited: Due to limited financial and human resources, the project faces difficulties in promoting the brand, expanding the customer base and creating a strong market presence
	- Competitive labor costs: Student freelancers enable businesses, startups, and individuals to access freelance services at reasonable costs, contributing to reducing recruitment costs and increasing flexibility in workforce utilization.	- Technological infrastructure is still limited: The current system still depends on the resources of a student startup, so its ability to scale servers, perform technical maintenance, and operate on a large scale still faces many difficulties.
EXTERNAL	O – Opportunities	T – Threats
	- The freelance trend is growing strongly in the digital economy: The demand for flexible working arrangements and project-based hiring is increasing, creating favorable conditions for job connection platforms such as J4S.	- Strong competition from major recruitment and freelance platforms: Fiverr, Upwork, LinkedIn, YBOX, and other established platforms.

	- Students are increasingly seeking additional income and practical work experience: This represents a potential freelance workforce that aligns well with the platform's operating model.	- Legal regulations regarding data protection and electronic payments may change in the future: Changes in policies and legal requirements could lead to additional compliance costs and impact the platform's operations.
	- Many startups and small businesses have a need to hire short-term personnel at reasonable costs: This creates a potential customer market for J4S's services.	- Economic fluctuations may reduce demand for freelance hiring: During periods of economic uncertainty or downturn, businesses tend to cut costs and limit hiring for short-term projects.
	- AI and digital technologies are advancing rapidly: This enables J4S to enhance its matching capabilities, optimize user experience, and improve the operational efficiency of the platform.	- Risks related to data security and online payments are becoming increasingly complex: Threats such as data leaks, cyberattacks, and online fraud can affect the platform's reputation and operations.
	- The micro-freelance market in Vietnam remains largely underdeveloped: This provides J4S with an opportunity to be a pioneer and establish an early competitive advantage.	- The rapid pace of technological development creates constant pressure for innovation: The platform must continuously upgrade its systems and adopt new technologies to maintain competitiveness and meet user expectations.

2.4 4P's MODEL

2.4.1 Product

- **Product:** J4S — Job For Students is an online freelance platform connecting student freelancers with clients who need short-term freelance services.

- **Target customers:**

- Student freelancers who want flexible jobs, extra income, practical experience, and portfolios.
- Employers such as individuals, student clubs, startups, and small businesses that need affordable short-term manpower.

- *Main service categories:*

- Graphic design.
- Content writing.
- Translation.
- Presentation design.
- Video editing.
- Basic programming.

- *Main platform features:*

- Account registration.
- Freelancer profile creation.
- Project posting.
- Proposal submission.
- Direct messaging.
- Rating and review system.

- *Positioning and differentiation:*

- J4S focuses specifically on student freelancers and short-term projects.
- This helps J4S avoid direct competition with large platforms such as LinkedIn, VietnamWorks, TopCV, Upwork, and Fiverr.
- The platform creates a more suitable and supportive freelance environment for students.

- *Future development:*

- Identity verification.
- Reputation management.
- Recommendation system.
- AI-assisted matching.

2.4.2 Price

- *Pricing strategy:* J4S applies a subscription-based pricing strategy.

- *For students:*

- Student freelancers can use the platform free of charge.
- They can create profiles, apply for jobs, communicate with employers, and receive reviews without paying platform fees.

- *Main revenue source:* Revenue mainly comes from employers through the Employer Membership Package.

- *Employer Membership Package:*

- Price: 99,000 VND per month.
- Employers can: Post freelance projects; Search for student freelancers; View freelancer profiles; Communicate with candidates; Manage recruitment activities.

- *Additional revenue source:*

- Featured Job Posting: 30,000 VND per post.
- Duration: 7 days.
- This helps employers increase job visibility and attract more applications.

- *Pricing rationale:*

- The price is affordable for startups, student clubs, small businesses, and individual clients.
- Free access for students helps reduce entry barriers and attract a larger student freelancer community.
- The subscription model is simple to manage and suitable for the MVP stage.

2.4.3 Place

- *Distribution strategy:* J4S uses an online direct distribution strategy.

- *Main channel:* The official J4S website is the main service delivery channel.

- *Access devices:*

- Desktop.
- Laptop.
- Tablet.
- Smartphone.

- *Service delivery:* All activities take place online, including account registration, job posting, freelancer searching, proposal submission, messaging, and review management.

- *Supporting channels:*

- Facebook fanpage.
- Student community groups.

- *Community outreach:* Student clubs, entrepreneurship centers, and startup communities help introduce J4S to potential users.

- *Place objective:*

- Make the platform accessible anytime and anywhere.
- Reach students and employers at low operating cost.
- Reduce the need for physical offices or intermediaries.

2.4.4 Promotion

- *Promotion strategy:* J4S applies an Integrated Marketing Communication strategy to reach both students and employers.

- *Promotion objectives:*

- Increase brand awareness.
- Attract student freelancers.
- Attract employers and clients.
- Build trust and engagement.
- Develop a student freelance community.

- *Social Media Marketing:* J4S uses Facebook and student community groups as the main communication channels.

- *Content includes:*

- Freelance opportunities.
- Platform updates.
- Student success stories.
- Portfolio-building guides.
- Career advice.
- User reviews.

- *Content Marketing:*

- J4S publishes educational content to support students.
- Topics include: CV preparation; Portfolio building; Communication skills; Project management; Freelancing experience; Interview preparation.

- *Referral Marketing:*

- Current users are encouraged to invite friends and classmates to join the platform.
- Referral benefits may include:
 - Increased profile visibility.
 - Priority profile display.
 - Badges.
 - Temporary visibility boosts.

- *Campaign implementation:*

- A detailed social media communication plan is presented in Section 2.4.5 Communication Plan for Social Media Campaign.

2.4.5 Communication Plan for Social Media Campaign

To support the promotion strategy, J4S develops a detailed social media communication plan. The plan includes 11 social media posts published from 24 June 2026 to 12 July 2026. Each post includes specific content, visual materials, posting time, and the person in charge. This plan helps J4S maintain consistent brand exposure, attract student freelancers and employers, increase user engagement, and build awareness for the platform.

Person in charge: Ho Nhu Thanh Ngoc

1	[CÔNG BỐ DỰ ÁN] 🌟 J4S – Job For Students Nền tảng kết nối sinh viên với cơ hội việc làm freelance. Bạn là sinh viên có kỹ năng nhưng chưa biết tìm job ở đâu? Bạn cần kiếm thêm thu nhập, tích lũy kinh nghiệm và xây dựng portfolio cá nhân? Hoặc bạn là cá nhân, CLB, startup hay doanh nghiệp nhỏ đang cần tìm người làm các công việc ngắn hạn với chi phí hợp lý? 👉 J4S ra đời để kết nối hai nhu cầu đó! J4S là nền tảng freelance dành cho sinh viên, nơi các bạn có thể tìm kiếm những công việc phù hợp với kỹ năng như: 🍷 Thiết kế poster, banner, logo 🌐 Dịch thuật tài liệu, CV, nội dung 🇮🇹 Thiết kế slide thuyết trình 👉 Viết content, mô tả sản phẩm, bài đăng mạng xã hội 🎬 Chỉnh sửa video ngắn, video TikTok 💻 Lập trình website cơ bản, landing page, portfolio Với J4S, sinh viên có thể dễ dàng tạo hồ sơ, ứng tuyển công việc, trao đổi trực tiếp với khách hàng và nhận đánh giá sau khi hoàn thành dự án. Đồng thời, khách hàng có thể nhanh chóng tìm được freelancer phù hợp, tiết kiệm thời gian và chi phí tuyển dụng. 🌟 J4S không chỉ là nơi tìm việc – mà còn là nơi sinh viên bắt đầu hành trình phát triển kỹ năng, kinh nghiệm và sự nghiệp của mình. 🌟 J4S – Kết nối sinh viên, mở ra cơ hội việc làm! #J4S #JobForStudents #FreelanceForStudents #SinhVienFreelance #TimViecLamSinhVien #CanTho #StartupStudent #FreelanceVietnam		21h50 24/06/2026

2	ALO SINH VIÊN ƠI! Có skill mà chưa có job? Có thời gian rảnh mà ví hơi “mỏng”? Vào J4S liền nha! Ở đây sinh viên có thể tìm các job freelance ngắn hạn như: 🎨 Design poster 📊 Làm slide 📝 Viết content 🎬 Edit video 🌐 Dịch thuật 💻 Làm web cơ bản Không cần quá pro, chỉ cần có kỹ năng và trách nhiệm là bắt đầu được rồi! J4S – Nơi sinh viên tìm job, kiếm thêm thu nhập và tích lũy kinh nghiệm thật. #J4S #JobForStudents #GenZDiLam #SinhVienFreelance	 A vibrant banner for J4S Job For Students. It features a group of diverse students sitting around a table, working on laptops and tablets. The banner includes the J4S logo, the text 'Job For Students', and a tagline 'Biến kỳ năng thành cơ hội'. There are also smaller icons representing various skills like 'Thiết kế Poster & Banner', 'Thiết kế Logo', 'Thiết kế Slide', 'Viết nội dung Content Marketing', 'Dịch thuật', and 'Làm web cơ bản'.	7h45 25/06/2026
3	FREELANCE LÀ GÌ? 👛 FREELANCE KHÔNG PHẢI LÀ “VIỆC GÌ ĐÓ QUÁ XA VỜI” Nhiều bạn sinh viên nghe đến freelance là nghĩ ngay đến những người cực kỳ giỏi, có nhiều năm kinh nghiệm hoặc làm việc với khách hàng nước ngoài. Nhưng thật ra, freelance có thể bắt đầu từ những công việc rất gần gũi: 🎨 Thiết kế một poster cho CLB 📊 Làm slide thuyết trình cho nhóm 📝 Viết caption cho shop online 🎬 Cắt dựng một video ngắn 🌐 Dịch một đoạn tài liệu 💻 Làm một landing page đơn giản Freelance không nhất thiết phải bắt đầu bằng job lớn. Đôi khi, nó bắt đầu từ một việc nhỏ nhưng làm thật nghiêm túc. J4S muốn giúp sinh viên hiểu rằng: Bạn không cần đợi đến khi “đủ giỏi” mới	 An infographic titled 'FREELANCE LÀ GÌ?' (What is Freelance?). It explains that freelance is not just for those with exceptional skills or years of experience. It lists various freelance jobs: 'Thiết kế poster cho CLB', 'Làm slide thuyết trình', 'Viết caption cho shop online', 'Cắt dựng video ngắn', 'Dịch tài liệu', and 'Làm landing page đơn giản'. It also includes a quote: 'Freelance không nhất thiết phải bắt đầu bằng job lớn. Đôi khi, nó bắt đầu từ một việc nhỏ nhưng làm thật nghiêm túc.' and a call to action: 'Bạn không cần đợi đến khi “đủ giỏi” mới bắt đầu. Bạn có thể bắt đầu để trở nên giỏi hơn.' and 'Freelance bắt đầu từ kỹ năng bạn đang có.'	19h 27/06/2026

	bắt đầu. Bạn có thể bắt đầu để trở nên giỏi hơn. ♣ Freelance bắt đầu từ kỹ năng bạn đang có. #J4S #FreelanceLaGi #JobForStudents #SinhVienFreelance

2.5.1 Customer Segments

J4S operates as a multi-sided platform, serving two main customer groups: student freelancers and employers. The platform creates value by facilitating interaction between these two groups, making both customer segments equally important to the success of the business model. As the number of users on each side increases, the overall value and attractiveness of the platform grow accordingly.

The first customer segment consists of university and college students who possess skills that can be provided as freelance services. These skills include graphic design, content writing, translation, presentation design, video editing, multimedia content production, and basic programming. Many students desire opportunities to earn extra income during their studies, accumulate practical work experience, build professional portfolios, and develop industry-relevant skills before graduation. However, they often face difficulties when having to compete with highly experienced freelancers on major international freelance platforms. J4S addresses this challenge by providing a platform tailored specifically for students, allowing them to access suitable freelance opportunities in a more supportive environment.

The second customer segment includes employers such as individuals, student clubs, startups, small businesses, and organizations with a need for short-term freelance services. These customers often seek flexible and cost-effective manpower solutions without having to commit to or bear the large expenses associated with hiring full-time employees. Their needs typically relate to project-based tasks such as content creation, graphic design, presentation preparation, translation, video editing, and website development.

J4S operates within a multi-sided market structure by connecting student freelancers and employers on the same platform. At the same time, the platform follows a niche market strategy by focusing specifically on student freelancers rather than the broader freelance workforce. This specialization differentiates J4S from traditional recruitment websites and large-scale freelance marketplaces, while creating a unique value proposition for both customer groups.

2.5.2 Value Propositions

J4S creates value for both student freelancers and employers by addressing the challenges faced by each group and providing a specialized platform that effectively connects supply and demand in the student freelance market. For student freelancers, J4S brings opportunities to access flexible freelance jobs that match their skills, interests, and academic schedules. Students can accumulate practical experience, earn extra income, develop communication and project management skills, and gradually build a professional portfolio. The platform allows students to showcase their

capabilities through portfolios, completed projects, skill descriptions, and client reviews, thereby helping them build credibility and enhance their future career prospects.

For employers, J4S provides access to a young, dynamic, and affordable workforce. Employers can directly connect and communicate with student freelancers through the platform, making the hiring process faster and more convenient. Instead of having to invest heavily in traditional recruitment processes, employers can quickly find suitable candidates for short-term projects and freelance jobs. This approach helps reduce recruitment costs, shorten hiring time, and increase operational flexibility.

One of the key value propositions of J4S is its specialization in the student freelance market. By focusing exclusively on student freelancers, the platform creates a more suitable environment where students can compete fairly and employers can easily access young, motivated, and affordable talent. This specialization helps address the difficulties students face when competing with experienced freelancers while providing employers with a flexible workforce for short-term projects.

In addition, J4S aims to enhance transparency and trust through freelancer profiles, portfolios, review systems, and future identity verification features. These mechanisms help reduce information asymmetry, support better hiring decisions, and create a safer environment for both freelancers and employers.

2.5.3 Channels

J4S primarily delivers its services through a direct online distribution channel using its official website platform. As a digital service platform, the website functions as the primary channel through which all core activities are performed, including account registration, profile management, freelance job posting, project searching, proposal submission, messaging, and review management. By using a direct online channel, J4S can maintain full control over service quality, user experience, and platform operations while minimizing intermediary costs.

The website is accessible through desktops, laptops, tablets, and smartphones, allowing users to conveniently access the platform regardless of their location. This online distribution model enables J4S to reach users across different regions without requiring physical offices or traditional distribution outlets.

In addition to the direct distribution channel, J4S utilizes supporting communication channels to attract and direct users to the platform. Facebook serves as the primary promotional channel because it is widely used by university students, startups, small businesses, and student organizations. Through Facebook pages, groups, and community forums, J4S can share freelance opportunities, platform updates, user success stories, and educational content related to freelancing and career development. These activities help increase brand awareness and drive traffic to the platform.

Therefore, J4S adopts a channel strategy that combines a direct online distribution channel through its website with supporting communication channels such as Facebook. This approach enables the platform to deliver services efficiently, attract users at a relatively low cost, and support long-term growth within the student freelance market.

2.5.4 Customer Relationships

J4S aims to establish long-term, trust-based, and interactive relationships with both student freelancers and employers. Since the platform operates as a multi-sided marketplace, maintaining strong relationships with both customer groups is essential to ensuring user retention, platform activity, and sustainable growth. The relationship strategy focuses on user support, trust building, continuous engagement, and long-term customer loyalty.

The platform supports customer relationships through user accounts, profile management systems, messaging functions, notification systems, and review mechanisms. These features allow users to communicate efficiently, monitor project progress, and maintain transparency throughout the recruitment and project execution process. By facilitating direct interaction between freelancers and employers, J4S helps strengthen trust and improve collaboration outcomes.

For student freelancers, J4S seeks to build long-term relationships by providing opportunities to develop professional profiles, expand portfolios, accumulate positive reviews, and strengthen personal credibility over time. As freelancers complete more projects successfully, their reputation on the platform grows, creating motivation for continued participation and long-term platform usage.

For employers, J4S aims to establish reliable business relationships by helping them access suitable candidates quickly and efficiently. Employers can build a recruitment history, receive feedback from freelancers, and improve their reputation within the platform ecosystem. Positive hiring experiences encourage employers to return for future recruitment needs and maintain long-term engagement with the platform.

To strengthen customer retention, J4S plans to continuously improve platform functionality, provide responsive customer support, conduct regular system updates, and collect user feedback for service improvement. These activities help ensure that the platform remains relevant to user needs while continuously enhancing customer satisfaction.

In addition, communication through the website and social media platforms such as Facebook helps maintain ongoing interaction between users and the platform. Through content sharing, community engagement, and user support activities, J4S can strengthen relationships with its customer base and encourage continued participation.

By combining trust-building mechanisms, continuous support, user engagement activities, and reputation development features, J4S aims to create a loyal user community and build sustainable long-term relationships with both student freelancers and employers.

2.5.5 Revenue Streams

J4S generates revenue primarily through membership packages purchased by employers. This revenue model is designed to support the platform's objective of attracting a large community of student freelancers while maintaining financial sustainability. Since students are the primary service providers on the platform and often have limited financial resources, J4S allows them to participate free of charge. This approach helps reduce entry barriers, increase user adoption, and strengthen the overall value of the platform.

The primary revenue stream of J4S is the Employer Membership Package, which is priced at 99,000 VND per month. Employers are required to subscribe to this package in order to access the platform's recruitment functions, including posting freelance projects, searching for suitable freelancers, viewing freelancer profiles, communicating with candidates, and managing recruitment activities. The membership model provides a stable and recurring source of income while remaining affordable for startups, student clubs, small businesses, and individual clients.

The secondary revenue stream comes from the Featured Job service. Employers can pay an additional fee of 30,000 VND per job posting to display their recruitment posts in prominent positions on the homepage or at the top of search results for seven days. This service increases job visibility, attracts more applications, and improves recruitment efficiency. At the same time, it creates an additional source of revenue without affecting the accessibility of the platform for student freelancers.

Overall, J4S adopts a subscription-based revenue model in which the Employer Membership Package serves as the main source of revenue, while the Featured Job service acts as a supplementary revenue stream. This structure supports both financial sustainability and long-term business growth.

2.5.6 Key Activities

J4S relies on several key activities to develop, operate, and continuously improve the platform. These activities are essential for delivering value to both student freelancers and employers while ensuring the long-term sustainability of the business.

The first key activity is platform development and maintenance. As a digital service platform, J4S must continuously develop, update, and improve its website to ensure stable operations and a positive user experience. This activity includes implementing new features, fixing technical issues, optimizing system performance, monitoring website security, managing databases, and ensuring platform accessibility across

different devices. Continuous system improvement is necessary to meet changing user needs and maintain service quality.

The second key activity is service delivery and platform operation. J4S must provide an environment where student freelancers and employers can connect efficiently. This includes facilitating account registration, profile management, project posting, proposal submission, communication between users, and review management. These operational activities ensure that users can successfully access and utilize the platform's services.

The third key activity is user acquisition and marketing. Since the value of the platform depends heavily on the number of active users, J4S needs to continuously attract both student freelancers and employers. This activity involves social media marketing, content marketing and promotional campaigns. Effective marketing helps increase platform awareness, expand the user base, and strengthen network effects.

The fourth key activity is customer support and platform management. This includes account administration, content moderation, handling user inquiries, resolving technical issues, managing user feedback, and maintaining service standards. Providing responsive support helps improve customer satisfaction and encourages long-term platform usage.

In addition, J4S continuously collects market information, analyzes user behavior, and evaluates customer feedback. These activities support data-driven decision-making, identify opportunities for improvement, and guide future platform development.

By effectively performing platform development, service delivery, marketing, customer support, and continuous improvement activities, J4S can maintain service quality, strengthen user engagement, and support sustainable business growth.

2.5.7 Key Resources

J4S relies on several key resources to develop, operate, and continuously improve its platform. These resources can be categorized into physical resources, human resources, intellectual resources, and financial resources, all of which are essential for supporting the platform's business model and long-term growth.

The first group is physical resources. These include the website platform, hosting services, domain name, databases, servers, system infrastructure, and supporting software tools. As a digital platform, J4S depends heavily on its technological infrastructure to ensure system stability, security, accessibility, and service quality. These resources provide the foundation for all platform activities, including account registration, job posting, proposal submission, communication, and user management.

The second group is human resources. The success of J4S depends on the capabilities of its development team, including programmers, UI/UX designers, project managers,

marketing personnel, and customer support staff. These individuals are responsible for designing, developing, maintaining, promoting, and improving the platform. Their knowledge and expertise directly influence service quality, user satisfaction, and platform performance.

The third group is intellectual resources. These resources include business knowledge, platform design concepts, student profile and portfolio systems, operational procedures, branding assets, user data, and matching algorithms. As the platform grows, accumulated user insights and platform experience become valuable strategic assets that help improve decision-making, enhance service quality, and strengthen competitive advantage. In addition, the J4S brand itself represents an important intellectual resource that contributes to user trust and platform recognition.

The fourth group is financial resources. Financial capital is required to cover hosting expenses, domain registration fees, software subscriptions, marketing activities, platform maintenance costs, and future expansion projects. Adequate financial resources enable J4S to sustain daily operations, invest in technology improvements, and support long-term business development.

Finally, the platform's user community can also be considered a strategic resource. The value of J4S increases as more student freelancers and employers join the platform. A larger and more active user base strengthens network effects, improves matching opportunities, and enhances the overall attractiveness of the platform for future users.

2.5.8 Key Partnerships

J4S builds strategic partnerships to support system operations, maintain service quality, and drive the long-term development of the platform. These partners play an important role in ensuring the platform operates stably, reaches the right target customers, and enhances market competitiveness.

The first partner group consists of Hosting and Domain service providers. These are partners that provide the technical infrastructure necessary for the J4S website to operate continuously, stably, and scalably in the future. Hosting services help store user data, freelancer profiles, job postings, and information related to platform operations. Meanwhile, domain names help build a professional brand image and make it easy for users to access the system.

The second partner group consists of technology partners. These partners can provide software solutions, system development tools, cloud computing services, data analytics tools, and platform operation support technologies. In subsequent development phases, J4S may collaborate with technology companies to upgrade the system, improve website performance, enhance information security, and develop new features tailored to user needs.

Through maintaining and developing these partnerships, J4S can ensure the stability of its technological infrastructure, improve platform performance, enhance system security, and create a solid foundation for sustainable growth in the future.

2.5.9 Cost Structure

J4S incurs various types of costs to operate, maintain, and expand the platform. As a digital service platform, the company must allocate financial resources to support technological infrastructure, human resources, marketing activities, and future business development. The cost structure is designed to remain relatively lean during the MVP stage while providing sufficient capacity for future growth.

The first category is fixed costs, which are incurred regardless of the number of users on the platform. These costs include domain registration fees, website hosting services, software subscription fees, website maintenance costs, content management expenses, and other administrative expenses necessary for daily operations. These expenditures ensure that the platform remains functional, secure, and continuously available to users.

The second category is personnel costs, which include compensation for programmers, UI/UX designers, project managers, marketing staff, customer support personnel, content management staff, and other team members involved in platform development and operation. Human resources are critical because they directly influence service quality, platform performance, and future innovation.

The third category is selling and marketing costs, which are necessary to increase brand awareness and attract both student freelancers and employers. These costs may include social media advertising, content creation, promotional campaigns, event participation, collaboration activities with student organizations, and digital marketing initiatives. Effective marketing investment is essential for user acquisition and platform growth.

The fourth category is variable costs, which increase as the platform expands and user activity grows. These costs may include additional server capacity, expanded cloud storage, cybersecurity services, third-party technology integrations, and future system upgrades. Variable costs are directly related to platform usage and business expansion.

During the MVP stage, J4S aims to maintain a lean cost structure by focusing on essential operational activities. As the platform grows and attracts more users, additional investments may be necessary to improve infrastructure, enhance security, strengthen marketing efforts, and support the development of new features. This cost structure is designed to balance operational efficiency, long-term scalability, and sustainable business growth.

CHAPTER 3: IMPLEMENTATION PLAN

3.1 CAPITAL

J4S is an online platform project directly built and operated by a group of students. The project does not require investment in factories, machinery, or raw materials like physical product business models. Cash expenditures are mainly focused on domain names, hosting, basic servers, and a small portion for promotional activities on Facebook.

Tasks such as website programming, interface design, content creation, media image production, fanpage management, user support, post moderation, system maintenance, bug fixing, and feature updates are all directly performed by the team members. Therefore, these activities are considered as contributions of effort and have not been calculated as cash labor costs in the initial phase.

The total expected capital required to build and maintain J4S for the first 12 months is 3,000,000 VND. This capital is used to pay for basic technology costs, initial promotional activities, and a few small incurred expenses during the trial operation process.

3.1.1 Capital Formation Sources

The entire capital source of J4S in the initial phase is formed from the contributions of the six team members. Each member contributes 500,000 VND, equivalent to approximately 16.67% of the project's total capital. The total capital contribution of the six members is 3,000,000 VND.

The team has not used bank loans and has not called for external investment capital yet because J4S is currently still a student project in the trial phase. Using self-contributed capital helps the team avoid bearing interest loan costs, escape the pressure of short-term capital repayment, and be proactive in adjusting the business model during the development process.

Table 3.1. Sources of Project Capital Formation

No.	Funding Source	Amount (VND)	Rate
I	Members' Capital Contributions	3.000.000	100%
1	Lâm Ngọc Phương	500.000	16,67%
2	Lê Anh Tuấn	500.000	16,67%
3	Tiêu Gia Huy	500.000	16,67%
4	Lê Hoàng Phương Thảo	500.000	16,67%
5	Hồ Như Thanh Ngọc	500.000	16,67%

6	Lâm Thành Phát	500.000	16,67%
II	Borrowed Capital	0	0%
III	Investment Capital Raised	0	0%
	Total	3.000.000	100%

Therefore, the project's estimated total capital is VND 3,000,000, entirely funded by contributions from the team members. A contribution of VND 500,000 per member is considered reasonable for a student project of this scale and does not place excessive financial pressure on the members.

3.1.2 Capital Utilization Plan

The majority of J4S's budget is used for domain names, hosting, and basic servers to ensure the website can operate for the first 12 months. This cost is expected to be around 220,000 VND per month, equivalent to 2,640,000 VND per year. This amount can be rounded and presented as approximately 2.6 million VND in the explanatory notes.

For marketing activities, the team expects to use 50,000 VND to promote some important content on Facebook during the launch phase. The remaining articles, posters, images, and media content will be directly built and posted by the team members, so no additional outsourcing costs will be incurred.

After deducting the costs of domain names, hosting, servers, and Facebook promotion, the project has 310,000 VND remaining in the total budget. This amount has not been fixedly allocated to a specific activity yet but is retained as a flexible budget to handle a few small expenses that may arise during the operation process.

Table 3.2. Capital Utilization Plan for the First 12 Months

No.	Category	Expected Amount
1	Domain name, hosting, and basic servers for 12 months	2.640.000
2	Promotion on Facebook	50.000
3	Flexible budget for small incurred expenses	310.000
	Total	3.000.000

Costs for software, data storage, security, and backup have not been identified as a specific monetary amount yet. In the initial phase, the team will prioritize using free plans, open-source tools, or services already integrated into the existing hosting package. When the number of users and data increase, the team will then consider upgrading these services.

Activities for user support, administration, website maintenance, bug fixing, and feature updates have also not been identified as cash costs yet. These tasks are directly undertaken by the team members and are considered as contributions of effort. In case a small payment arises for the above activities, the team can use the remaining flexible budget.

3.1.3 Profit Distribution Method

After the revenue is used to cover the actual project expenses, the remaining amount is considered the profit after costs. The team plans to retain 10% of the profit after costs for reinvestment in J4S's operations. This reinvestment fund can be used for purposes such as upgrading hosting services, increasing storage capacity, improving security, adding new features, or carrying out necessary marketing activities.

The remaining 90% of the profit after costs will be distributed equally among the six members. Since all members have the same capital contribution ratio, each member will receive an equal share of the distributed profit.

The actual profit percentage received by each member is calculated as follows:

$$90\% \div 6 \text{ members} = 15\%.$$

Therefore, after allocating 10% of the profit for reinvestment, each member will receive 15% of the project's total profit after costs. If only the distributed profit portion is considered, each member receives 1/6 of the profit distribution fund, equivalent to 16.67% of that 90% portion.

It should be noted that each member still owns 16.67% of the project's capital contribution, but the actual profit received is 15% of the total profit after costs because 10% of the profit is retained for reinvestment.

3.1.4 Payback Period

The initial capital of J4S is VND 3,000,000. Based on the average scenario where 6 employers subscribe to the Membership Package and 6 job posts use the Featured Job service each month, the expected revenue is calculated as follows:

Revenue from the Membership Package:

$$6 \times \text{VND } 99,000 = \text{VND } 594,000/\text{month}$$

Revenue from the Featured Job Posting Service:

$$6 \times \text{VND } 30,000 = \text{VND } 180,000/\text{month}$$

The total average monthly revenue is:

$$\text{VND } 594,000 + \text{VND } 180,000 = \text{VND } 774,000/\text{month}.$$

The average monthly cost of VND 250,000 is determined based on the estimated total budget for the first 12 months, including VND 2,640,000 for domain, hosting, and

basic server costs, VND 50,000 for Facebook promotion, and VND 310,000 as a flexible budget for unexpected small expenses.

The total estimated cost for 12 months is:

$$\text{VND } 2,640,000 + \text{VND } 50,000 + \text{VND } 310,000 = \text{VND } 3,000,000.$$

Therefore, the average monthly cost is calculated as follows:

$$\text{VND } 3,000,000 \div 12 \text{ months} = \text{VND } 250,000/\text{month}.$$

The amount of VND 250,000 represents the average cost used for financial planning purposes. The actual cost in each month may vary because some expenses, such as Facebook promotion and flexible budgets, may only occur at certain periods.

After deducting the average monthly cost, the expected profit after costs of the project is:

$$\text{VND } 774,000 - \text{VND } 250,000 = \text{VND } 524,000/\text{month}.$$

In this plan, it is necessary to distinguish between two concepts of the payback period.

First, the project payback period based on profit refers to the time required for the total profit after costs generated by J4S to equal the initial investment amount. This indicator reflects the overall business performance of the project before any profit is retained for reinvestment or distributed among members.

The project payback period is calculated as follows:

$$\text{VND } 3,000,000 \div \text{VND } 524,000 = \text{approximately } 5.7 \text{ months}.$$

Therefore, after approximately 5.7 months of operation under the expected revenue scenario, the total profit after costs generated by J4S can reach an amount equivalent to the initial investment of VND 3,000,000. However, this does not mean that the members have directly recovered their full initial capital contribution, because a portion of the profit is retained within the project.

Second, the member payback period through distributed profit refers to the time required for members to actually receive a total distributed profit amount equal to their initial capital contribution.

According to the profit distribution plan, J4S retains 10% of the profit after costs for reinvestment in hosting upgrades, security improvements, feature development, and necessary marketing activities.

The monthly retained profit for reinvestment is:

$$\text{VND } 524,000 \times 10\% = \text{VND } 52,400/\text{month}.$$

The profit distributed to members is:

$\text{VND } 524,000 \times 90\% = \text{VND } 471,600/\text{month}.$

Since only 90% of the profit is distributed, the time required for the total distributed profit received by members to equal the initial investment amount is calculated as follows:

$\text{VND } 3,000,000 \div \text{VND } 471,600 = \text{approximately } 6.4 \text{ months}.$

The average distributed profit received by each member per month is:

$\text{VND } 471,600 \div 6 \text{ members} = \text{VND } 78,600/\text{member/month}.$

With an initial capital contribution of VND 500,000/member, the time required for each member to recover their contributed capital is calculated as follows:

$\text{VND } 500,000 \div \text{VND } 78,600 = \text{approximately } 6.4 \text{ months}.$

Therefore, the payback period of the entire project based on profit is approximately 5.7 months, while the time required for members to actually recover their capital through the 90% distributed profit is approximately 6.4 months. This difference occurs because 10% of the profit is retained within the project for reinvestment instead of being immediately distributed to members.

3.2 FINANCIAL PLAN

J4S operates under a digital service platform model, so it does not incur raw material or production machinery costs. The total cost of the project is mainly related to maintaining the website and deploying initial promotional activities. Tasks that require a lot of time and human resources, such as website development, interface design, content moderation, customer care, maintenance, and bug fixing, are all directly performed by the members.

In the first 12 months, the total budget to build and operate J4S is expected to be 3,000,000 VND. This amount is simultaneously the total capital that the six members need to contribute and the maximum budget expected to be used in the first year. Identifying the same level of capital and cost helps avoid duplicate counting between the initial investment capital and operating costs.

3.2.1 Determining the Total Cost of the Project

Costs for the domain name, hosting, and basic servers are expected to be around 220,000 VND per month. For 12 months, the total cost is calculated as follows:

$220,000 \text{ VND} \times 12 \text{ months} = 2,640,000 \text{ VND}.$

Thus, the cost of the domain name, hosting, and servers for one year is approximately 2,640,000 VND, equivalent to about 2.6 million VND when rounded. This is the largest cash expenditure for J4S because the website needs to be maintained continuously so that users can register accounts, post jobs, search for freelancers, and exchange information.

For marketing activities, the project allocates 50,000 VND to promote some important articles on Facebook. Other media content will be built and posted by the team themselves through the fanpage, student groups, and the members' personal networks.

Costs for software, data storage, security, and backup currently do not have specific figures. The team will utilize free tools or available functions within the hosting service. Similarly, costs for user support, administration, maintenance, bug fixing, feature updates, and contingencies have also not been separately identified because these tasks are mainly performed by the team themselves.

The remaining budget of 310,000 VND is kept as a flexible budget. This amount will only be used when small expenses actually arise, such as purchasing additional storage space, renewing a supporting tool, or handling a technical bug that requires external services.

Table 3.3. Expected Costs for the First 12 Months

No.	Category	Cost for 12 months	Average cost/month
1	Domain name, hosting, and basic servers	2.640.000	220.000
2	Promotion on Facebook	50.000	Approximately 4,167
3	Flexible budget for small incurred expenses	310.000	Approximately 25.833
4	Software, storage, security, and backup	No specific cost identified yet	Leverage free tools
5	User support and administration	No fixed costs calculated	Self-implemented by the team
6	Maintenance, bug fixes, and feature updates	No fixed costs calculated	Self-implemented by the team
	Total	3.000.000	250.000

The total average monthly cost is calculated as follows:

$$\text{VND } 3,000,000 \div 12 \text{ months} = \text{VND } 250,000/\text{month}.$$

Thus, the total cost to build and operate J4S in the first 12 months is VND 3,000,000, equivalent to an average of VND 250,000 per month. This budget level is highly suitable for the scale of a student project, as the team primarily leverages their own skills, time, and available resources.

3.2.2 Determining the Membership Package Price

J4S plans to provide a Membership Package for employers at a price of VND 99,000 per month. Users who subscribe to this package can post jobs, search for student freelancers, view freelancer profiles, communicate with candidates, and manage recruitment activities on the platform.

With an average operating cost of VND 250,000 per month, assuming that 6 employers subscribe to the Membership Package each month, the average allocated cost per employer is calculated as follows:

$\text{VND } 250,000 \div 6 = \text{approximately VND } 41,667/\text{employer/month.}$

With a selling price of VND 99,000, the difference between the service price and the allocated cost is:

$\text{VND } 99,000 - \text{VND } 41,667 = \text{approximately VND } 57,333/\text{employer/month.}$

The contribution profit margin of each Membership Package is calculated as follows:

$\text{VND } 57,333 \div \text{VND } 99,000 \times 100\% = \text{approximately } 57.9\%.$

The price of VND 99,000 helps the project cover operating costs when the number of employers is still limited while also creating a financial source to maintain and develop the platform. Student freelancers can still create accounts, build profiles, search for jobs, and submit proposals for free in order to reduce participation barriers.

3.2.3 Determining the Featured Job Posting Service Price

In addition to the Membership Package, J4S provides a Featured Job Posting Service at a price of VND 30,000 per post for 7 days. Job postings using this service will receive priority display on the homepage or appear higher in search results.

During the early stage, the review and placement arrangement of featured job posts will be directly handled by team members. Therefore, this service does not generate additional labor costs for each post. The revenue of VND 30,000 per featured post is considered an additional income source to support website maintenance costs and generate extra profit for the project.

The Featured Job Posting Service is an optional service. Employers only need to use it when they want their job posts to reach more students or shorten the time required to find suitable candidates.

3.2.4 Revenue Forecast and Payback Capability

To achieve the goal of recovering the initial investment within approximately six months, J4S estimates that it needs an average of 6 employers subscribing to the Membership Package and 6 featured job postings per month. Under this assumption, the average monthly revenue is VND 774,000.

After deducting the average operating cost of VND 250,000, the profit after costs reaches approximately VND 524,000 per month. Of this amount, 10% is retained for reinvestment:

$$\text{VND } 524,000 \times 10\% = \text{VND } 52,400.$$

The profit distributed to members is:

$$\text{VND } 524,000 \times 90\% = \text{VND } 471,600.$$

Each member receives:

$$\text{VND } 471,600 \div 6 \text{ members} = \text{VND } 78,600/\text{member/month}.$$

Each member contributes an initial capital amount of VND 500,000. With the expected distributed profit of VND 78,600 per month, the time required for each member to recover their capital contribution is calculated as follows:

$$\text{VND } 500,000 \div \text{VND } 78,600 = \text{approximately } 6.4 \text{ months}.$$

J4S is expected to recover the initial investment at the project level after approximately 5.7 months, based on the total profit after costs generated by the project. However, because 10% of the profit is retained for reinvestment and only 90% is distributed, the actual time required for members to fully recover their individual capital contributions is approximately 6.4 months.

3.3 PROJECT LAUNCH PLAN

The launch plan will be implemented in different phases to allow J4S to validate market demand, minimize financial risks, improve the platform based on actual user feedback, and gradually introduce advanced features. The website will continue to serve as the main service delivery channel, while the Facebook fanpage and student community groups will be used to attract users and maintain engagement.

3.3.1 EXE101 Phase and Initial Platform Development

During the EXE101 phase, the team focused on validating the feasibility of the idea and developing the initial platform. The team conducted a survey with 110 participants and used 103 valid responses to evaluate the demand for freelance jobs, desired features, and customers' willingness to pay.

Based on the survey results, the team identified the target customers, including students with skills who are looking for short-term jobs and individuals, clubs, startups, or small businesses that need to hire workers at reasonable costs. The team also completed market analysis, SWOT analysis, the 4P marketing strategy, and the Business Model Canvas to define the value proposition, revenue sources, access channels, and required resources.

During this phase, the team developed the brand identity, website, Facebook fanpage, and basic platform functions. Students can create profiles, update their skills and

portfolios, search for jobs, and submit proposals. Employers can post jobs, view freelancer profiles, and contact suitable candidates. The platform also supports messaging, rating systems, and basic content management functions.

J4S only acts as a connection platform between the two parties. Employers and freelancers independently agree on job requirements, pricing, deadlines, and payment methods. The platform does not interfere with payments between both parties but only generates revenue from the Membership Package and the Featured Job Posting Service.

Along with website development, the team implemented communication posts on Facebook to introduce the project, explain freelance work, and promote the platform's services. The feedback collected during this phase will be used to improve the interface, features, and operational quality.

3.3.2 EXE201 Phase – Pilot Launch and Business Model Validation.

During EXE201, the project will transition from idea validation to pilot operation and business feasibility testing. The main priorities include:

- Conducting controlled testing with students, student clubs, individuals, startups, and small businesses in Can Tho.
- Testing the Membership Package for employers and the Featured Job Posting Service based on actual payment and usage data.
- Adding email and phone number verification through OTP authentication to improve user identity reliability.
- Developing a reporting and reputation management system to review violations, moderate suspicious accounts, and protect users.
- Improving system security, data backup processes, database performance, mobile compatibility, and customer support procedures.

3.3.3 Long-term Development Plan

After the MVP and the testing phase in EXE201 are validated, J4S will gradually expand its technology, market reach, and revenue model. The long-term development plan includes:

- Applying AI technology to analyze jobs, standardize job descriptions, recommend suitable candidates, and enable intelligent matching based on skills, reputation, and job suitability.
- Developing a mobile application after the website model and user demand have been validated, thereby avoiding unnecessary development costs during the early stage.
- Expanding cloud storage capacity, server capabilities, analytics tools, and system monitoring solutions to support a larger number of users.

- Developing additional employer packages and premium services based on actual user behavior and willingness to pay.

Table 3.4. Summary of Project Development Phases

Phase	Estimated Timeline	Main Activities	Expected Results
Phase 1 – EXE101	May–July 2026	Market research, business model development, website/fanpage development, pricing validation, and communication campaign implementation.	The project idea and implementation platform are validated.
Phase 2 – MVP after EXE101	The next 3–4 months	Development of core functions, internal testing, and limited trial testing.	Usable MVP and initial user feedback
Phase 3 – EXE201	The next semester	Pilot launch, revenue testing, verification, reputation management, security improvement, and operational optimization.	Validated business model and adjusted financial plan
Phase 4 – Future Expansion	After the testing phase is validated	AI-powered connection and secure payments	A student-focused freelance platform with scalability and sustainable development potential

3.3.4 Launch Risks and Proposed Control Measures

Table 3.5. Key Launch Risks and Proposed Mitigation Measures

Risks	Control measures
Low brand awareness and limited initial credibility	Utilize Facebook and student communities, publish instructional content, gather positive feedback, and collaborate with student clubs and startups.
Limited financial resources	Apply a lean MVP approach, prioritize essential features, leverage non-monetary resources from founding

	members, and only expand expenditures as revenue increases.
Fake accounts, unclear job information, and disputes	Implement verification, content moderation, reporting functions, two-way ratings, clear platform regulations, and transparent project information.
Data security and online payment risks	Utilize secure hosting, conduct regular backups, enforce access control, monitor the system, and rely on trusted third-party payment services during the initial phase.
Competition from large platforms	Maintain a niche market focusing on students, offering affordable pricing for hirers, student-friendly profiles, and specializing in short-term projects.
Limited operational experience	Start with controlled testing, develop standard operating procedure documentation, gather feedback, and improve the platform prior to expansion.

Overall, the implementation plan is structured to balance market opportunities with the initial limited resources of the project. Through a phased launch, customer behavior validation, a lean cost structure maintenance, and incremental improvements in both credibility and technology, J4S can mitigate risks in the initial phase while establishing a foundation for sustainable growth.

APPENDIX

* ASSESSING TEAM PERFORMANCE

Evaluation criteria will be based on:

- Progress in completing assigned tasks on time.
- Quality and accuracy of the completed work.
- Active participation in group discussions and idea contribution.
- Cooperation and support among team members.
- Responsibility and commitment to assigned duties.
- Communication and coordination throughout the project.

No.	Members	Student Code	Job description	Score 1 (Check point 1)	Score 2 (Check point 2)	Score 3 (Check point 3)	Score (Full process)
